

THE POWER OF

**REDARC**®

## **Do I need the optional GA-ELC Enhanced Lighting Controller for my Gauge?**

The REDARC G52 series gauges are brilliant, but in sometimes at night they can be a little *too* brilliant and may need to be dimmed.

- If your vehicle has dimmable dash lights with the dimmer in the negative or earth line of the dash lights, in most cases you can simply connect the gauge dimmer wire direct to the dash dimmer and the gauge brightness will follow the dash light brightness.
- If your vehicle does not have an earth side dash dimmer, and you find the backlight too bright at night, REDARC recommend using the optional GA-ELC (Enhanced Lighting Controller). The GA-ELC, triggered by the park lights, can be programmed to set the daytime brightness and night time brightness and even different colours for daytime and night time.

For information on the GA-ELC see <https://www.redarc.com.au/monitoring-gauges-ga-elc>
