AC BATTERY CHARGERS.

The REDARC range of SmartCharge AC Battery Chargers by DEFA are compact, easy to use and keep your 12 volt vehicle or secondary battery healthy, fully charged and always ready to go.

Available in 4, 6, 8 and 10 amp variants, REDARC SmartCharge AC Battery Chargers are perfectly suited for applications such as your car, boat, motorbike or RV. All you need to do is plug it in, clip it on and turn it on. That's it, just set and forget!

Compatible with common automotive battery types including lithium (LiFePO4), the SmartCharge range gives you peace of mind knowing your battery is getting the right amount of charge without the risk of overcharging.

- An easy to use, one button solution
- User-friendly interface with backlight for legibility
- Suitable for a wide range of battery types and sizes
- Battery meter makes it easy to see the status of your battery
- Integrated cable management system

A flat battery can occur at the most inconvenient times and without warning, leaving you frustrated and potentially stranded. This usually leaves you with two options, call for technical assistance which can be an expensive and time-consuming, or invest in a fast and practical AC battery charger.

Whether you use your vehicle on a daily basis or for occasionally, you're putting a strain on the battery. Most people only use their vehicles for short distances and, when combined with the use of various accessories such as phone chargers, lights and air conditioning, all impact on the power coming out of your battery.

A CHARGER FOR ALL APPLICATIONS.

Whether you have a motorbike, boat, jet ski, scooter, tractor or anything with an electric starter motor, it is likely that it isn't used every day. The SmartCharge range will ensure that no matter what your mode of transport is we can give the battery the charge it needs. In fact, the SmartCharge range also performs a battery check both before and after charging and can warn you if anything is wrong with the battery.

A SIMPLE SOLUTION.

Simple to use and easy to set up, the SmartCharge range is the ideal solution for your vehicle's battery.

To operate, all you have to do is attach the clamps to the battery terminal, insert the plug into the socket and press the "on" button. The SmartCharge then gets to work charging and restoring your battery.

The battery display gives a simple readout of the charging status and indicates when your battery is fully charged. Once charged, all you have to do is wind up the cables and it's good to go for the next time you need it.

SMARTCHARGE ACCESSORIES.

A range of accessories are available to make recharging batteries even easier.

The 12V Charging Kit and 12V Charging Cables allow connection to the battery allowing an easy and hassle-free charge.

Each cable includes an integrated battery indicator that enables you to check the status of the battery via a red, yellow or green light.
